Abstract (en)
[origin: EP0492092A1] The invention relates to a hair dryer 1 having a housing 3 for holding the electrically driven units, especially the heater 16 and the electric motor 18, which can be brought into the operational position by means of a slide switch 25. An electrically conductive switching part 27 can be operated directly by the slide switch 25 and hence produce the power supply between a unit which can be operated electrically and a voltage source. <IMAGE>
