Abstract (en)

[origin: EP0492116A1] Such a boot consists overall of a rigid shell part surmounted by an upper (1), composed of a front cover element (2) and a rear cover element (3) which is articulated on a transverse spindle (7). <??>An assembly of fasteners for the cover elements (2, 3) consists, on the one hand, of a clamping system (8) with a flexible tie (9) of which a guide device (15), fitted on the rear cover element (3), is capped by a removable cover (17) interacting with the face of the said rear cover element (3), and, on the other hand, of a strap (30) for fastening the top of the upper (1), comprising means for holding on the said rear cover element (3). <??>According to the invention, the means for holding the strap (30) on the rear cover element (3) are arranged on an upwards extension (17a) of the cover (17), covering over the guide device of the tie in order to form a single cover (31) for the guide means (15) or for the rear holding means of the assembly of fasteners. <IMAGE>
