Abstract (en)

[origin: EP0492299A2] In an erectable mine (1), the laying devices (5) for the sensor lines (6) are attached externally to the top side of the mine housing (2). During storage and transport, the laying devices (5) bear in their initial position closely against the top side (11) of the mine housing. During the distribution of the mines over the terrain, they are spread away from the top side (11) of the mine housing (2) and transferred into their active position, so that the sensor lines (6) can be ejected inclined at an angle of approximately 45 DEG to the vertical. <IMAGE>
