Abstract (en)

The closure structure comprises a disk-like element with an optionally threaded axial ring (3), to be used in particular for nebulizable liquid containers. Furthermore a substantially perpendicular or inclined tubular element (8) extends on the disk-like element, is monolithic therewith and is connected to a coupling (9), which is internal to the ring (3), for a liquid drawing duct (10). The tubular element has a first end shaped like a dispenser nozzle and a second threaded end for coupling to a gun (17) for dispensing gases, mixtures of gases and/or fluids under pressure.
