Abstract (en)
[origin: EP0492717A1] Wallet safe protected storage of objects, with a housing (2,80) closing element (20,82) and locking means controlled by an electric signalprocessing and control circuit (70) provided with an electrically conductive screening (14) for providing an actuation signal for destructing means (26,106) when the screening is acted upon, the closing element operates a contact (40,40e;86,88) which marks the closed position thereof, and an auxiliary contact (60,62;60',62') which is operated during the closing movement to deactivate the activation function of the signal processing circuit (70) and which reverts to the inoperative state after the locking means have become active. <IMAGE>
