Abstract (en)

[origin: EP0493229A1] Apparatus for removing waste, consisting of a comb formed by a series of parallel arms (6, 7) extending in the direction of the cutting cylinder (2), delimiting between them gaps in which spikes (3) on the peripheral surface of the cutting cylinder (2) can pass and transporting pieces of material (4) constituting cutting waste to be detached from the spikes (3), characterised in that the apparatus for removing waste (1) consists of a shaft (5) on which the pairs of parallel arms (6, 7) are immobilised in positions which can vary as a function of the longitudinal position of the spikes (3) on the cutting cylinder (2), and in that the arms (6, 7) of each pair have inner faces (11f, 11i) which are shaped so as to delimit between them a gap whose width increases from front to rear. <IMAGE>
