Abstract (en)
[origin: EP0494828A1] Security document which cannot be falsified with a chemical agent, especially with sodium sulphite, comprising at least one agent which is sensitive to bases, characterised in that it comprises at the surface and/or in bulk at least one compound generating alkalinity under the action of sodium sulphite. The alkalinity generator is preferably an aldehyde or a ketone. The invention is also intended to provide a composition intended to make a document incapable of being falsified with sodium sulphite, whose characteristic is that it contains: - at least one compound generating alkalinity< - at least one agent sensitive to strong bases and/or a coloured indicator - at least one binder usually employed in paper manufacture. e
