Abstract (en)
[origin: EP0495150A1] In order to achieve, in a façade construction with frameless insulating glazings (14) fastened via supporting adhesive bonds (12) on façade profiles (10), an optimised heat insulation in the glass join, observing existing regulations with regard to the ventilation of glass rears, and an optimum vapour pressure equalisation and drainage in the region of the glass join, additional profiles (62) forming or having cavities are arranged in a bridging manner in the intermediate space between opposite seals of the insulating glazings (14). The additional profiles (62) at the same time keep the intermediate space free from any filling material, at least one end of the additional profiles (62) being open for drainage and/or vapour pressure equalisation. <IMAGE>
