Abstract (en)  
[origin: EP0495159A2] Device for transporting at least one free-flowing material, which device has at least one inlet, at least one outlet and also at least one transport line connecting the inlet to the outlet. At least two connections allocated in each case to a material station (4) are arranged in such a way that they can alternatively be coupled via a connection coupling (7) to the transport line (1) adapted for a go-devil. The transport line (1) can be formed at least in certain areas from segments (12) which can be connected to one another in the area of coupling elements (11).
