Abstract (en)
[origin: EP0495194A2] The invention relates to a reflector lamp having a cold light reflector (1) and a tungsten-halogen lamp (2). The reflector body (3) consists of glass and has an external mat finish in order to avoid a glare effect due to the high luminous density of the light source (2). It is possible to eliminate an external mat finish if the reflector body (3) consists of opaque glass. <IMAGE>
