Abstract (en)
[origin: WO9106087A1] The publicity support device mountable on a vehicle roof is comprised of the combination on the one hand of a rectangular panel (1) made of multilayer plastic material and presenting three folds (2, 3, 4) parallel to one of its edges delimiting three surfaces (5, 6, 7) and a flap (8) whose length is slightly smaller than the width of the roof (18) of the vehicle on which the device is mounted, thereby allowing to form a tubular structure of which the cross-section is a triangle substantially rectangle, and on the other hand, of a bendable fixing system consisting of one or a plurality of magnetic rubber elements or elastic cables. It is intended to be fitted on all vehicles, both professional and private.
