Abstract (en)
[origin: EP0496025A1] A means for providing a separable connection of elements, preferably flat elements (1), having simple design and simple and easy handling, is designed such that at least one connecting element (3) is assigned to the elements (1) to be connected at their edge region (2) that faces the respective other element (1) and that the connecting elements (3) of the elements (1) to be connected can be engaged in pairs, the connecting elements (3) being in each case integral components of the elements (1) that are to be connected and having an engagement zone (4) for mutual engagement, or the connecting elements (3) having an engagement zone (4) for mutual engagement and a securing zone (5) and the securing zone (5) being used for securing to the elements (1). <IMAGE>
