Abstract (en)
[origin: EP0496076A1] The invention relates to an espagnolette lock having an espagnolette connection piece (39) displaceable by the actuation of a handle, the handle follower (5) being rotatable out of a middle basic position in two directions and respectively returning automatically into its middle basic position in a spring-loaded manner; to achieve a solution which is advantageous especially in terms of space, it is proposed that a slide (13) spring-loaded in the direction of the handle follower (5) be supported, by means of two fingers (12, 12') arranged in a fork-shaped manner relative to one another, on the drivers (11, 11') projecting on the wide side (10) of the handle follower (5). <IMAGE>
