Abstract (en)

[origin: EP0496117A2] A process is described for the production of a sewing thread, particularly a sewing thread containing synthetic fibres, provided with a finishing agent. In this process, after spinning, a finishing agent is applied to the sewing thread, with the application to the sewing thread of monomers and/or oligomers which undergo ionic and/or radical oligomerisation or polymerisation to develop the finishing agent, and/of the finishing agent itself, and a treatment to produce radicals and/or ions is performed before the application of the monomers, oligomers and/or the finishing agent, simultaneously with the application and/or after the application of the monomers, oligomers and/or the finishing agent.
