Abstract (en)
[origin: JPH05215343A] PURPOSE: To fix a transparent plate easily to the opening of a parallelepipedal shell by providing means for enclosing the inner edge and the transparent plate. CONSTITUTION: A shell 1 has fixation members formed by eight holding tongues P1-P8 arranged respectively on two opposite sides 9, 10 of inner edge 4. A transparent plate 3 has two opposite sides 24, 25 bearing eight projections S1-S8. Identical codes provided for the holding tongues of the shell 1 are applied to the projections of the transparent plate. Since the number of pieces required for fixing the transparent plate to the opening of the parallelepipedal shell is limited to only two, fixation is simplified.
