Abstract (en)

[origin: EP0496341A2] The invention relates to a method for the manufacture of parquet flooring (2) formed from parquet fillets (1) and intended for subsequent application to a base, and also to an apparatus for the manufacture of parquet flooring (2). To achieve a joint closure, which is as exact as possible, between adjacent parquet fillets (1) of the parquet flooring (2), provision is made for the parquet fillets (1), to the longitudinal sides and end faces of which glue has been previously applied, to be conveyed in at least two paths next to one another through a heating section (5) in order to activate the glue, a lateral pressing force being simultaneously exerted, and subsequently through a cooling section (8) in order to cure the glue, a vertical, surface pressing force being exerted on the parquet fillets (1) in such a way that they are pressed against one another by way of their end faces in a joint-sealing manner by means of the conveying force. <IMAGE>
