Abstract (en)

[origin: EP0496708A1] The present invention relates to a delivering-dispensing assembly for washing machines, comprising a drawer vessel (1) divided into five compartments (2, 3, 4, 5, 6), thereabove there are provided means for supplying water for performing the washing cycle. The main feature of the invention is that the compartments comprise a middle loading compartment (3), for introducing a first amount of water and an overwashing compartment (4), for introducing a second amount of water and the full dose of the washing detergent. The second amount of water and the full detergent dose are supplied after the achievement by the first amount of water of a set temperature, in order to optimize the detergent performance and to increase the washing efficiency. <IMAGE>
