Abstract (en)

The present invention relates to a covering element (1) particularly applicable to items of footwear for soccer, which comprises a body made of a substantially elastic material which defines a cavity for the insertion at least of the front portion of a soccer shoe and has means for removable retention on the shoe. The body defines, on its outer surface: at the front, at the tip, a substantially planar front surface (20), above, between the tip and the instep of the foot, a substantially concave surfer (30), and laterally, an outer lateral surface (40) which extends into a spur toward the rear upper part and an inner lateral surface (50) with a shape which corresponds substantially to the configuration of the surface of the shoe. <IMAGE>
