Abstract (en)

[origin: EP0497107A1] In order to design a corner-support unit (1), located on the casement, for the corner support of a turn-and-tilt window or the like, a bearing sleeve (2) being connected to a corner-support angle (6) adjustably via a connecting web (3) so as to terminate in a fastening plate (4), in such a way that a subsequent pressure regulation can be carried out on it in a simple way, one or more eccentrically rotatable cylindrical pins (22) connected to the corner-support angle (6) engage into a respective long hole of the fastening plate (4), surrounding them and extending in the direction of the associated leg of the corner-support angle (6). <IMAGE>
