Abstract (en)

The apparatus includes a hang preventing mechanism (31) which has a tongue (39) for preventing a bill from hanging from a bill accumulating box (23) into a bill passage (5). The bill is conveyed through the bill passage to the bill accumulating box. The hang preventing mechanism (31) is pivotally supported and is spring biased by a biasing mechanism (40) for holding the tongue (39) to prevent a bill, received in the bill accumulating box (23), from hanging from the bill accumulating box while the tongue is allowed to turn by a bill (B) which passes through the bill passage for entering the bill accumulating box. <IMAGE>
