Abstract (en)
There is disclosed a blow room installation (1) for treating fibrous material supplied by a bale opener (2) and which comprises a sequence of treatment machines (e.g. blenders (5 and 9), separator (7), opener and cleaners (13 and 16)) which apply successive treatments to the material prior to delivery of the treated material to one or more carding machines (23, 24), in which each treatment machine of the blow room installation has a respective drive motor, control means and local control station incorporating signal transmitting means, and a central control station (20) is connected to each of the local control stations (C1 to C10) by a signal transmission line (21) which comprises the only connection between the central control station (20) and the treatment machines. <IMAGE>
