Abstract (en)

[origin: EP0497717A1] Each of the oscillating members (2) mounted on the same supporting axle (1) is individualised by means of annular spacers (5) interposed between the contiguous members and equipped with projecting bosses (7) which come into contact with the bosses of the adjacent spacer. The rod (9) cooperating with the arm (6) ensures the angular retention of the spacer (5) corresponding to the orientation at which the member (2) can rock between the bosses (7). <IMAGE>
