Abstract (en)
[origin: EP0498485A2] In a refrigeration apparatus with at least one basket (17) which is mounted on lateral guides in the container (10) and can be pulled out, and with a door (16), portions (15) of which project, in the 90 DEG open position, into the pull-out region, the basket (17) can be enlarged in a simple manner, in that this forms at the hinge side a spacing gap (27) from the neighbouring wall (13), in order to ensure unhindered pulling out, while the basket (17) is advanced on the opposite handle side until directly on the neighbouring wall (12), so that the basket is eccentrically mounted. <IMAGE>
