Abstract (en)

The refrigerated stand comprises an insulated trough (10) covered at its top by a window (18, 20, 22), a shelf (24) at an intermediate height in the trough, and a cell (36) beneath the shelf. At transversely opposite ends of the shelf, respective openings (32, 34) are defined which establish communication between the area of the trough above the shelf and the area beneath the shelf. The cell is defined by a vertical wall spaced from the bottom of the trough so that a space is defined in communication with a first of said openings, and by a horizontal wall spaced from the shelf so that a gap (41) is defined in communication with both the space and the second of the openings. In the space, a heat exchanger (46) and fans (50) are installed which generate an air flow running through the gap, spreading above the shelf through the second of said openings, and returning to the space through the first of said openings. <IMAGE>
