Abstract (en)

[origin: FR2657796A1] The invention relates to improvements made to a scouring installation comprising: - a treatment vessel (2), - spraying means (3) for spraying at least one liquid onto objects to be treated, - means (4) for recovering the liquid after it has trickled over the objects, - a movable support (5) on which the objects are arranged, - means (6, 7) for guiding the support (5) in its movements through an opening (8) made in the wall (9) of the chamber, - a means (10) for blocking off the aforementioned opening. These improvements are characterised in that, instead of the means (10) for blocking off the opening (8) being articulated on the wall (9) of the chamber, this means is solidly attached to the movable support (5).
