Abstract (en)

[origin: EP0499120A2] In particular the insertion and removal of the objects to be machined into and from the clamping device 10 is to be improved by two segments 14, 16 for setting to different diameters of the objects being adjustable relative to one another on a rotating disc-shaped plate 12 along a common guide, and by the segments 14, 16 each having at least two stop surfaces 20, 22 which are approximately perpendicular to the adjusting direction and are at a roof-shaped angle to one another. <IMAGE>
