Abstract (en)
[origin: EP0499500A1] The technical sector of the invention is that of containers for a propellant charge in the form of at least two loads. <??>The container (1a-1b) according to the invention comprises a casing (9a-9b) delimiting an inner volume, in which a propellant charge in particular can be placed, and it is intended to be fixed to a second container in the region of one of its front faces (10a-10b), and it is characterised in that it comprises electrical conductive means intended for receiving and transmitting a signal coming from a weapon, and connection means making it possible, after it has been fixed to the second container, to ensure an electrical connection between these conductive means and other conductive means carried by the second container. <??>The invention is used for tank ammunition. <IMAGE>
