Abstract (en)

The object of the invention deals with a detachable and disposable protector of the type compounding a laminate structure piece (1), such as for instance a paper, a non-woven fabric or similar low-cost material, which includes at one of its faces, taken as the main or recto side (1a), an antiadhesive treatment (2) based on silicone, paraffin or other similar products, while the opposed face or reverse side (1b) exhibits at least a tape (3) compounding a molten or cold self-adhesive matter. This organisation makes easy the stowage, storage and merchandising of the laminate protector without resorting to the paraffin-paper tape and concurrently due to the suppression of said paraffin-paper tape, the application of the protecting sheet on the seat, is facilitated and simplified, preferably at the seat's back. <IMAGE>
