Abstract (en)

[origin: EP0500120A2] A structural member for building walls, in particular for outer building walls, possesses a glass pane (1). To obtain a particularly good heat-insulating action, the structural member (1) possesses a flat element (3) which is arranged on the inside (4) of the structural member (1), is impervious or pervious only to a small extent to light from outside (5) and forms, with the glass pane (2), a space (7) closed at the bottom and open at the top. The flat element (3) can be moved out of position, in particular be pivotable about a horizontally extending pivot pin (8) situated at the bottom end of the flat element (3). The outside (9) of the flat element (3) is preferably provided with a highly polished metal coating. Ventilation openings (20) can be provided in the lower region of the structural member (1). <IMAGE>
