Abstract (en)

[origin: EP0500125A2] Fastening for windows or doors. Mounted longitudinally displaceably in a fitting groove (31) of the wing profile (30) is a continuous espagnolette (2) which is covered by a faceplate (1) and which so interacts with at least one pivoting bolt (10) that the pivoting bolt (10) is swung out when the espagnolette (2) is displaced in one direction and is swung back when the espagnolette (2) is displaced in the other direction. In order to ensure a reliable mounting of the pivoting bolt when a flat faceplate is used, the espagnolette (2) is offset in parallel in the region (3) of the pivoting bolt (10) by means of cranks (21, 22), and there is fastened to the rear side of the faceplate (1) in the region of the recess (19) a bearing block (5) for the pivoting bolt (10) which passes through the espagnolette (2) through a long hole (4) in the espagnolette (2) and which has a screw passage (6) and can be screwed together with the faceplate (1) up against the wing profile (30).
