Abstract (en)

[origin: EP0500419A1] The distributing valve (70) comprises a controlled slide valve (3) and a pressure-compensating slide valve (16) which is associated with complementary means (84, 85, 95) in such a way that it causes the pressure drop in the controlled slide valve (3) to depend on the difference between the service and load-sensing pressures, according to a linear function having a strictly positive coefficient and a strictly negative constant. <??>In the control system, each compensating slide valve (16) operates according to the same linear function, or at least one of the distributing valves comprises a compensating slide valve operating according to a different linear function. <IMAGE>
