Abstract (en)

[origin: EP0500483A1] The arrangement comprises a strip (1) made of deformable material having a width which corresponds very substantially to the separation of the elements (V1) and (V2), the arrangement being noteworthy in that: - the strip (1) is firmly fixed, on at least one of its faces, directly in a built-up manner, to one or more sections (2) which are capable of delimiting a series of containers (2a), - the series of containers receive a desiccating product (3) for absorbing the relative humidity of the air trapped between the elements (V1), (V2); - each of the longitudinal free edges of the strip (1) which is equipped with the section or sections (2) receives a sealing product (4) making up two beads (4a), (4b) for fixing the assembly in a peripheral manner with the elements (V1) and (V2). <IMAGE>
