Abstract (en)

[origin: EP0500510A1] The invention concerns a device (50) for therapeutic pressure treatments. Device (50) is comprised of a base member (34) for support against a fixed or moveable support (32), together with a primary pressure body (36) and another pressure body (52) which is adjustable laterally and in height. The device (50) can in this manner be made to suit different spines and obtain the desired treatment results so that improperly rotated vertebrae causing a blockage can be mobilized and massage of the muscles in the back can be carried out. In another embodiment two primary pressure bodies (36), together with an extra support member (37), may support an axle (38) with one or two secondary pressure bodies (40) mounted thereon. <IMAGE> <IMAGE>
