Abstract (en)

[origin: EP0501029A1] The invention relates to a warp-beam lifting carriage having measures which guarantee a three-dimensional positioning of the lifting carriage inserting the full warp beam into the weaving machine and extracting the empty warp beam and which therefore ensure an efficient exchange of warp beams which are received in the weaving machine by means of floating axles. <??>Because a rapid warp-beam exchange is possible with the warp-beam lifting carriage improved according to the invention, the invention contributes to increasing the productivity of the weaving machine. <IMAGE>
