Abstract (en)

[origin: EP0501191A1] A shower partition comprises an upper guide rail (6), on which at least one door element (2, 4) is suspended by means of a guide part (8) having a guide roller (78) and is arranged so as to be displaceable. The guide rail (6) is connected to a fixed wall element (10, 12) and/or a wall of the room. This shower partition is to be developed further to the effect that the guide rail (6) can be aligned horizontally with simple handling and functionally reliable guiding of the door element (2, 4) is achieved with few components. It is proposed that the guide part (8) has a bar (76) which grips over the guide rail (6), preferably on its inside. The guide roller attached to the bar (76) rests on the upper outer surface of the guide rail (6) which is attached such that it can be aligned horizontally relative to the wall element (10, 12) and/or the wall of the room. <IMAGE>
