Abstract (en)

[origin: JPH0543105A] PURPOSE: To provide a device for conveying and piling workpieces at a high speed without causing damage thereon by providing highly stable operation and high accuracy of piling. CONSTITUTION: A device for conveying and piling workpieces comprises a conveyer 13. The conveyer 13 includes a plurality of endless belts 19. The endless belts 19 are operated in stages and are disposed in parallel below a vacuum chamber 29. The vacuum chamber 29 forms ducts, which are separated from one another in a horizontal direction and comprise openings at the bottoms. An ejector lever 20 acting on an upper part 51 of a flexible tape 32 is provided in each of the ducts. The flexible tape 32 is connected to a beam member 7 and a compensation means 35 containing a compression spring. The conveyer is disposed above a piling store 14. The piling store comprises a grid in which a roller conveyer 18 removes a batch 47. The device is used for exchanging a sheet and a corrugated board, especially for conveying and piling a corrugated board plate.
