Abstract (en)

The present invention relates to a device which can be fitted to a ski in order to facilitate the skiing, and comprising a spacer-rod (1) coupled, at the end portions thereof, to the front portion of the top face of the ski (30). The spacer rod is associated with the ski by means of articulation means (5) which are specifically designed to allow one ski to be inclined, advanced and mutually oscillated with respect to the other ski, so as to hold the ski tips evenly guided and joined to one another, in order to easily learn the skiing practice. <IMAGE>
