Abstract (en)
The branch (C1) of the submerged mooring means is connected to a buoy (1) of the inflatable and deflatable type, connected in turn through at least one small flexible hose (5) to a power pack (7) arranged on the edge of the wharf or pier at the mooring area and provided with means of any suitable type whereby the condition of said buoy (1) can be modified so that when said buoy (1) is deflated it rests on the bottom of the harbor together with said mooring branch (C1), while when said buoy (1) is inflated it rises up to the surface and carries therewith said mooring branch (C1) to which one can moor a watercraft in a rapid and simplified manner and with no risk of fouling. <IMAGE>
