Abstract (en)

[origin: EP0502354A2] An end cap (10) for closing the end of a hollow profile bar of windows, doors or the like is provided with clamping projections (12) engaging in the profile bar (11) and has an external periphery (13) axially adjoining the bar profile (11). In order to be able to form the end cap (10) differently externally and internally optically but also in terms of material, it is divided axially into at least two separately manufacturable part pieces (14, 15) which are assembled in a radially fixed manner after their manufacture. <IMAGE>
