Abstract (en)
[origin: EP0502361A1] Trench shoring device with shoring plates (1) and means of accommodating stays which can be inserted between two parallel shoring plates (23, 25) and hold the latter at a distance apart, each shoring plate (1) being formed from a plate body (23, 25) and a plate frame (7) defining the plate body (23, 25) on all sides. The plate body (23, 25) consists of parallel metal cover sheets and web members (24) arranged between the sheets and in the form of sheet-metal bodies folded or bent in a trapezoidal shape in cross-section, in which arrangement if need be the one cover sheet is formed from the covering area of the web members (24) as well as from sheet-metal plates connecting these covering areas. <IMAGE>
