Abstract (en)
[origin: EP0502373A2] Heating apparatus having a burner arranged in a combustion chamber which preferably has a double casing and is provided with a flue-gas take-off and having a lamellar heat exchanger. In order, in such a heating apparatus, to be able to arrange the lamellar heat exchanger (12) in a simple manner, it is envisaged that the double casing (2) of the combustion chamber (1) has an outwardly directed flange (3) and the lamellar heat exchanger (12) is held in a circumferential casing (11) which is designed congruently with the inner wall or the inner walls of the double casing (2) and which is provided with flanges (10), to which the casing (11) with the double casing (2) and the flue-gas take-off (17) is connected. <IMAGE>
