Abstract (en)

[origin: EP0502433A1] The arrangement for covering openings in buildings comprises a frame made up of rigid corner elements (2) and longitudinal and transverse struts (3, 4), the longitudinal and/or transverse struts (3, 4) of which are connected to the corner elements (2) in such a way that they can be adjusted in length. The corner elements (2) have jaws (11), which can be pressed outwardly against the reveals of the openings (12) in buildings, and cover plates (14) are fastened on the frame (1) in such a way that they overlap one another and are adjustable with respect to the frame (1). <IMAGE>
