Abstract (en)
[origin: EP0502753A1] The technical sector of the invention is that of containers capable of receiving a propellant charge. <??>The container (1-12-13) according to the invention, which is intended to be fixed to another container in the region of one of its front faces (3a-3b), is characterised in that the fixing means comprise, on the one hand, a ring (2) arranged on a contraction (5) formed in the region of one end of the container, said ring being capable of sliding in an axial direction in order to cover a second contraction (6) formed on the other container, and, on the other hand, attachment means (4a-4b) arranged on one and/or the other container in the region of the front faces (3a-3b) intended to come into contact with one another. <??>The invention is used for tank ammunition in the form of two bundles. <IMAGE>
