Abstract (en)

[origin: EP0504013A1] The vacuum cleaner permits use in cells under an atmosphere hostile to man, as it can be dismantled under remote control. It essentially comprises three main parts (10, 20, 30), which can be dismantled by virtue of fastening means (11, 13) easily accessible to a screwdriving machine (3) or to the gripper of a remote control handling device. The upper part (10) preferably carries the motor (15) and the main filter (26). The lower part (30) preferably comprises a container (31) for large-sized waste. Application to the cleaning of cells intended for irradiated fuel retreatment. <IMAGE>
