Abstract (en)
[origin: EP0504566A2] The invention relates to a letter filing appliance consisting of flat material made of multi-layered cardboard and covered with paper, fabric and/or plastic film, and having a filing appliance back (10), two cover hinges (12, 12') which are arranged laterally on the filing appliance back and are constructed on the outside as a groove (16) and on the inside as a bead (20) bounded by lateral bending lines (18), and having two filing appliance covers (14, 14') which are hinged to the filing appliance back (10) in the region of the cover hinges (12, 12'). In order to reduce the restoring forces in the region of the hinge joints and to avoid premature wear of the back labels arranged on the outer surface of the filing appliance back (10), it is proposed according to the invention that a back hinge (26, 26') be arranged on the side of each cover hinge (12, 12') facing the filing appliance back (10), said back hinge running parallel to said cover hinge and being constructed on the inside as a groove (28) and on the outside as a bead (30). <IMAGE>
