Abstract (en)

[origin: EP0504567A1] In a domestic refrigerator with an evaporator (14) and, arranged at a spatial distance therefrom, a temperature controller (18), as well as a feeler tube (20) which bridges the distance to the evaporator and the free length of which is surrounded by a protective tube (21), the protective tube (21) is provided close to its ends with a stop (28), in the form of a deformation which changes its external diameter, which stop absorbs axial forces and prevents a displacement on the feeler tube. As a result, the required protection of the feeler tube (20) against contact is guaranteed. <IMAGE>
