Abstract (en)

[origin: EP0505244A1] The heat exchanger of the invention comprises a bundle of tubes (10) arranged in at least one row and in which each tube has a body (12) finishing with an end (14) received in a collector plate (20). At least two adjacent tubes (10) of the bundle have a terminal centre-to-centre distance (A') separating their respective ends (14) which is different from a central centre-to-centre distance (A) separating their respective bodies (12). <IMAGE>
