Abstract (en)
[origin: WO9108967A1] In this rubbish collector, the inside of which is divided into several compartments by inner walls (2, 5) and in which the outer walls have apertures (4) forming accesses to these compartments limited by the inner walls (5) and the plane (8), the flaps (7) forming the upper closing surfaces (7) are hinged at the peak (6) and the flaps (1) forming the floor (1) are hinged at the bottom of the inner walls (2) and rest obliquely to the bottom of the outer walls on projections (3) therefrom, thus making the inner walls (2) terminating beneath the upper edge of the collector vertically movable. To operate the rubbish collector there is also at least one spindle (9) passing through the outer walls of the collector about which the latter can be rotated through 360 DEG .
