Abstract (en)
[origin: WO9206757A1] A module is described which is suitable for forming a toy road track, by linking together a certain number of them by slotting by means of a suitable joint which, as well as making a physical connection, functions as a hinge which allows sinusoidal movement of the track in addition to, obviously, a rectilinear movement. This module also has uni-directionality as a special characteristic, giving the completed track a pleasant aspect, together with extremely simple assembly.
