Abstract (en)
The tile covering structure comprises a frame (4) which can be associated with a base panel (5) and which includes a plurality of modular elements (6,7) preferably made of plastic material which can be mutually associated in a snap-together manner. Each modular element is alternatively provided with first means (16) for supporting, ventilating and aligning gutter tiles (3) and with second means (17) for ventilating the roofing panel and for engaging and supporting covering tiles (2). The second means interact with locking means (23-26) suitable for locking the covering tile. The structure allows to achieve optimum and easy installation of the roof in a short time. <IMAGE>
